

## CREATING NEW ECONOMIES FUND 2022 Small Grant Cycle Triple Bottom Line

This overview provides some helpful guidance to understanding and addressing the "triple bottom line" question in your CNEF application. Resourceful Communities staff is more than happy to talk through this question as you write your application. Please do not hesitate to contact any staff member! (<a href="https://www.conservationfund.org/our-work/resourceful-communities/our-experts">https://www.conservationfund.org/our-work/resourceful-communities/our-experts</a>)

## What is the Triple Bottom Line?

Resourceful Communities' "triple bottom line" includes **environmental** stewardship, community **economic development** and **social justice** to address community challenges. Instead of looking at challenges as isolated issues, the triple bottom line approach emphasizes that challenges – poverty, -isms, resource loss – are connected. To be effective, solutions address these connections.

Proposed projects for the Creating New Economies Fund (CNEF) small grant program must incorporate the triple bottom line. This means your **project must result in environmental, economic and social justice benefits/impacts**.

## Here are some examples of triple bottom line impacts:

- **Economic Impacts:** These can be direct (creating a job or business) and/ or indirect (creating economic opportunity that may bring more direct economic impact in the future such as job training or revenue generation).
- **Environmental Impacts:** Don't just think about traditional environmental projects like recycling or planting trees! More important or relevant environmental impacts might support environmental justice efforts, getting people outside, helping people retain and/or use their land more sustainably.
- **Social Justice Impacts:** Do not confuse "social justice" (trying to achieve equitable economic, political and social rights and opportunities for everyone) with "social" (simply bringing people together).

<b>Economic Impacts</b>	Environmental Impacts	Social Justice Impacts
Creating or supporting a job	Providing environmental education	Meaningfully engaging people of color or low wealth
Generating additional income	Growing food more sustainably (fewer pesticides, growing yearround)	Overcoming barriers to participation
Helping develop new job skills	Protecting land and increasing landownership retention	Teaching advocacy skills
Helping teach "soft" skills to young people	Getting people outdoors and enjoying nature	Addressing racism or other injustices
Teaching business skills like: entrepreneurship, business planning or marketing	Reducing energy use and consumption	
Developing projects that have the potential to bring economic impact in the future (like agriculture, ecotourism, value-added food productions, etc.)	Helping people understand what environmental justice is and how it impacts them	

This chart shows how moving from a single bottom line project to a triple bottom line project helps create more meaningful and significant impact.
